

Bogeng Song

Ph.D. student at Georgia Tech, Research and Experimental Psychology

Email: bsong91@gatech.edu

Education and Research Experience

PhD: Georgia Tech 08/2024 -- 08/2029(Expected)

Program: Research and Experimental Psychology

Advisor: Dobromir Rahnev, Ph.D.

Full-time Research Assistant (F1- OPT) 08/2023 -- 08/2024

Department of Psychology, Ohio State University

Advisor: Brandon Turner, Ph.D.

Master: New York University 08/2021 – 05/2023

Major: General Psychology

Research Assistant (Part-time) 08/2020 – 06/2021

Institute of Psychology, Chinese Academy of Sciences

Advisor: Ying Wang, Ph.D.

Bachelor's Degree: Capital Normal University (China) 09/2015 – 07/2019

Major: Psychology

Research Interest

My research centers on human visual perception and metacognition. I investigate how people make decisions and evaluate confidence under ambiguous or noisy visual input, extend perceptual studies to naturalistic and real-world tasks, and explore the neural mechanisms underlying perception and metacognitive judgment. My work combines behavioral experiments with behavioral modeling to better understand how the mind processes visual information.

Publication

1. The influence of response bias on confidence and accuracy in multi-alternative tasks (accepted by Visual Science Society Conference, Talk, 2025)
2. Implied gravity promotes coherent motion perception (accepted by npj Microgravity, 2025)
3. Eyes on hold: motion task difficulty jointly delays microsaccade and pupil responses (accepted by Scientific Report 2025)
4. Microsaccade rates reflect trial difficulty for perifoveal motion discrimination (accepted by Visual Science Society Conference, Poster, 2023)
